CC 101 – Introduction to Computing

Laboratory Worksheet No. 1 | Week 3: Computer Components I – Hardware (CO2)

"Know Your Machine": Exploring the Computer Unit You Are Using

Name: Aljade G. Bora	**Section:** BSCS 1-1
Computer Unit Used (Desktop/Laptop, brand): FUIZON	**Date:** September 16, 2026

I. Objectives

At the end of this activity, you should be able to:

- Identify the major hardware components of the computer unit you are using and describe the function of each.
- Use built-in Windows 11 tools to inspect and record your computer's technical specifications.
- Distinguish between input, output, processing, and storage devices on an actual working computer.
- Document your exploration accurately and reflect on what you learned.

II. Materials Needed

- A computer unit running Windows 11 (school laboratory PC or personal laptop/desktop)
- This worksheet (printed copy, or the digital file to fill out and submit)
- Optional: smartphone camera, to photograph the physical unit and ports for your own reference

III. Background

Every computer, whether a desktop tower or a laptop, is built from hardware components that fall into four general categories: input devices (send data into the computer, e.g., keyboard, mouse), output devices (present processed data to the user, e.g., monitor, speakers), the processing/storage unit (CPU, RAM, and drives that compute and hold data), and ports/peripherals (connectors that link external devices to the system unit). Windows 11 also provides several built-in tools — Settings, System Information, Device Manager, and Task Manager — that let you inspect these components without opening the case. This activity uses both direct observation and these software tools.

IV. Procedure

Part A – Physical Inspection (5–10 minutes)

1. Examine the computer unit in front of you. If it is a desktop, look at the system unit (tower/case); if it is a laptop, examine the whole chassis.

   —

2. List all the input devices you can see or that are built in (e.g., keyboard, mouse, touchpad, webcam, microphone).
3. List all the output devices you can see or that are built in (e.g., monitor/screen, speakers, headphone jack).
4. Locate the available ports on the unit (USB-A, USB-C, HDMI, audio jack, Ethernet/LAN, power, etc.) and note what each one is typically used to connect.

Part B – System Identification (Settings)

5. Click Start → Settings → System → About.
6. Record the Device name, Processor, Installed RAM, Device ID, and System type shown under Device specifications.
7. Scroll down to Windows specifications and record the Edition, Version, and OS build.

Part C – Detailed Hardware Check (System Information)

8. Press the Windows key, type System Information, and open it (this runs the msinfo32 tool).
9. On the System Summary page, record the System Manufacturer, System Model, BIOS Version/Date, and Total Physical Memory.

Part D – Device Manager Exploration

10. Right-click the Start button and choose Device Manager.
11. Expand at least six (6) categories — for example: Display adapters, Network adapters, Sound/video/game controllers, Disk drives, Keyboards, Mice and other pointing devices, and Universal Serial Bus controllers.
12. For each category you expand, write down the specific device name Windows lists (this is the exact model of that component in your unit).

Part E – Performance and Storage Check (Task Manager)

13. Open Task Manager (Ctrl + Shift + Esc) and click the Performance tab.
14. Record the CPU name, base speed, and number of cores; the total Memory (RAM) and its speed; and the Disk type (HDD or SSD) and capacity.

Part F – Software Snapshot (Optional / Bonus)

15. Go to Settings → Apps → Installed apps. List five (5) installed applications and classify each as System Software or Application Software.

V. Data and Findings

Table 1. System Identification Summary (Parts B & C)

Item	Your Findings
Device name	DESKTOP-4MKAC1R
Processor	12th Gen Intel(R) Core(TM) i5-12400 2.50 GHz
Installed RAM	16.0 GB (15.8 GB usable)
Device ID	635A5817-6B5D-4DD7-BDB1-0BD91DB6852E
System type (32-bit / 64-bit)	64-bit system, x64-based processor
Windows edition	Windows 10 Pro
Windows version	22H2
OS build	19045.5011

Edit with WPS Office

Item	Your Findings
System manufacturer	Micro-Star International Co. Ltd
System model	MS- 7D48
BIOS version / date	American Megatrends International, LLC. A.EO, 1/11/24
Total physical memory	15.8 GB

Table 2. Physical Components Observed (Part A)

Component Observed	Type (Input/Output/Storage/Processing/Port)	Description / Observation
CPU	Processing	It is the one process the entire computer.
Mouse	Input	Mouse is the one we use to press or control everything we press on computer.
Monitor	Input	Monitor is the front part, where we see everything we type.
Keyboard	Input	Keyboard is where we type everything we want to write.

Table 3. Device Manager Findings (Part D)

Device Manager Category	Specific Device Name Listed
Display adapters	Intel(R) UHD Graphics 630

Edit with WPS Office

Device Manager Category	Specific Device Name Listed
Network adapters	Realtek PCIe Gbe Family Controller VirtualBox-Host- Only-Ethernet Adapter WAN Minipot (IKEv2) WAN Minipot (IP) WAN Minipot (IPv6) WAN Minipot (L2TP) WAN Minipot (Network Monitor) WAN Minipot (PPOE) WAN Minipot (PPTP) WAN Minipot (SSTP)
Sound, video and game controllers	High Definition Audio Device HD Audio Driver for Display Audio HD Audio Driver for Display Audio
Disk drives	TEAM T253256GB
Keyboards	HID Keyboard Devices
Mice and other pointing devices	HID-complaint mouse
Universal Serial Bus controllers	Generic USB Hub Intel (R) USB 3.20 eXtensible Host Controller-1.20 (Microsoft) USB Composite Device USB Root Hub (USB 3.0)

Table 4. Software Snapshot (Part F, Optional / Bonus)

Installed Application	Classification (System / Application Software)
Microsoft Word	Application
Google Chrome	Application
Games	Application

Edit with WPS Office

Installed Application	Classification (System / Application Software)

VI. Realization (Reflection)

In two to four sentences each, answer the following in your own words.

1. What did you discover about your own computer unit that you did not know before doing this activity?

Maybe their uses and function, when I o this activity now I know their uses and also how they uses or what re they for especially some other parts of computer.

2. Which hardware component do you think matters most to how your computer performs, and why?

The CPU matters most because it's the brain that processes all instructions. A fast CPU makes everything run faster, while a slow one bottlenecks your whole system even with good RAM and SSD.

3. How might knowing your computer's hardware and software specifications help you as a future IT/CS professional?

It helps me identify and know more deeper all the hardware parts of the computer that really helps me to know and that thing could help me in my future job as a computer analyst.

4. What difficulties, if any, did you encounter while completing this activity, and how did you resolve them?

How to find specifically the hardware parts like, finding where the device manager because I'm not really master of computer that's why it find me difficult to find but otherwise I find it though through the help of my classmates and now I already know it.

VII. Scoring Guide

Criteria	Description	Points
Completeness	All tables (1–4) and required fields are filled out.	30
Accuracy	Recorded specifications and device names match what the tools actually show.	30
Realization / Reflection	Answers are thoughtful, specific to the student's own unit, and well written.	30
